PLC/Programming Learning Package

Fredericktown, Ohio, December 5, 2008 - Divelbiss Corporation, providing cost-effective customized solutions to standard industrial automation and control problems since 1974, announces the PLC/Programming Learning Package based on *patented PLC on a Chip® technology.

The PLC/Programming Learning Package allows companies to provide comprehensive in-plant technical training for technical/maintenance personnel. The study outline is comprised of 16 blocks which, taken in order, build on one another to teach a student the basics of programmable logic controllers in addition to programming a controller using ladder logic with function blocks. The course is designed for hands-on study using a Solves-It! plug-in PLC coupled with the Trainer/Simulator boards manufactured by Divelbiss.

The Divelbiss PLC/Programming Learning Package provides everything a student will need with the exception of a personal computer running Windows® that is required by the included EZ Ladder® programming software. The Learning Package includes a Solves-It! Model 210, programming cable (RS-232), stand-alone DIN-rail/base mount socket, SI-DEMO-02 Trainer/Simulator, product User's Manual (on CD), EZ Ladder Programming Manual (on CD), the **PLCs & Control – a Practical Approach** Student's Manual and Student's Workbook on CD. Also included is the EZ-LDCD-01 Current Release Version Standard of EZ Ladder software. By supplying the text and graphic materials (Student Manuals, workbook, and product User's Manuals) on CD rather than in print, Divelbiss is able to keep the cost for each student under \$300.
